Diy mask pattern with filter pocket pdf

Use these free sewing patterns and templates to sew up a DO-it-yourself face mask that you donate to a hospital, medical office, health professionals, or other essential workers. These face masks can be washed and reused and many of them have pockets for filters that extend the life of them even more. Keep in mind that according to the World Health Organization (WHO), your mask should ideally be made of three layers of dust- a water-resistant outer layer, a middle layer that acts as a filter, and an inner layer of water-absorbing dust. These DIY face masks do not replace the N95 masks, but work as a last resort for healthcare workers. If you sew a straight line, you sew one of these do-it-yourself face masks. They are a fast project that takes very little time to make and takes only a few materials that you are probably already on hand. There are a few different styles and methods to make them, but all the patterns below create a mask that can be worn by healthcare workers. This easy-to-sew face mask makes a basic mask and comes in three different sizes for children and adults. It's a fast project, only takes 30 minutes from start to finish, so it's great if you have little time. It is also an incredibly easy sewing, only straight lines are used to compose the mask. If you don't have elastic, you can make a face mask that uses fabric bands that strap instead. This is a surgical style mask with folds so that it meets the whole nose and mouth nicely. If you are looking for a more opposed mask, this is a great pattern. There is a free pattern piece included that can be used to make an adult or child mask. You have a face mask for a 3-6 year old, 7-12 year old, or teen and adult with this free pattern. This pattern is specially made so that the elastic puts less pressure on the ears than other masks. If you own an electronic slicer, you'll find the masks even easier to make, as there are template files for both the Cricut and the silhouette that is available to cut out your pieces. This free face mask pattern features a removable filter bag, allowing you to replace the filter and wash the mask. There are also adjustable straps made of ribbon so that the mask can fit any adult and can be more comfortable than tight elastic bands. An SVG file is also included, so you can cut the pattern with a Cricut Maker. The Fu Face Mask can be quickly sewn together and contains clues on how to sew it effectively, with the option to make one that looks better, or just to get it done quickly so you can make a forest. There are 3 sizes available and it attaches with ribbon. There is a diagrams and written instructions. These face masks look a lot like surgical masks and are very nice to make. They use pleating on the sides of the mask for a comfort factor and even if you've never done this technique before, the clues are very straightforward about how to do it. Since the mask is sewn together, sewn, Unlike the others, there are no templates, you just cut custom. Both adult and children's sizes are included. If you own a Cricut Maker electronic slicer, you can quickly work out cutting your mask. A mask template is provided and all you have to do is place some dust on your mat and then have the Cricut cut. It will even mark your sewing lines for you. After you've cut out all your pieces, just follow the tutorial to sew the mask. If you're looking to make these masks in bulk, this quick DIY face mask tutorial is a great choice. No fancy templates, it's just a cut and sewing pattern that you quickly take through the process of making a mask. For those of you who are visual learners, this face mask tutorial has a ton of photos to help you learn how to make them. It makes a surgical style mask with elastic. Binding is added to the short edges to make sewing on the mask look neat and neat. When you're done sewing your face masks, it's time to donate them so the people who need them can get them as soon as possible. A great place to start would be your local community. Contact hospitals and medical centers in your area to see if they need masks. If no masks are needed, consider holding them to see if needs change in the coming days. There is also a Facebook group called Million Mask Mayday that you participate in to find out which hospitals across the country are in the most need. This is also a great resource for more patterns and a way to connect with others who make and donate DIY masks. The DIY face mask pattern in this post teaches you to make a pleated fabric face mask with elastic ear loops or fabric bands. If you don't find elastic to make elastic ear loops, the pattern includes additional instructions to make and use fabric bands. You fabric bands of cotton fabric, t-shirt material, or ready-made bias binding. You can make this simple fabric face mask with or without optional indoor filter pocket. The filter bag allows the wearer to insert additional layers of filter material if they wish. The pattern also includes instructions for inserting nasal wire into the upper nose bridge section to create a more appropriate fabric mask. A free printable PDF version of these pattern instructions is available at the bottom of the post. And you watch the video tutorial on Youtube. If you don't have a sewing machine, I have a separate post with 5 ways to make a No-Sew Face Mask and another free pattern that shows you how to fold a No-Sew Bandana Face Mask. Is there a need for Fabric Face Masks? Yes! The CDC says the use of cloth masks can help slow the spread of the disease. Many creators have asked for a To sew homemade surgical style face masks for their families, communities and local hospitals. There is currently a high demand for all types of face masks. Since disposable masks are hard to find, many people are making fabric masks as if face covering. Members of the community are encouraged to use reusable fabric face masks and other face coverings when in public, or in situations where social distancing is difficult What's more, because there is such a high demand for protective equipment for health care workers, many hospitals across the country have requested homemade surgical masks as a stopgap measure. According to the CDC, dust masks are a crisis response option when other supplies are exhausted. The CDC now recommends the use of Cloth Face Coverings Federal health officials now recommend people over the age of 2 cover their mouths and noses with cloth face masks when in public. This is a voluntary public health measure designed to stop the spread when people have to visit public areas, such as supermarkets and public transport stations. CDC is additionally recommending the use of simple cloth face coverings to slow the spread of the virus and help people who may have the virus and do not know of transmitting it to others. Sewing a cloth face mask for yourself will allow medical grade surgical masks and N95 masks to be reserved caregivers and patients. Homemade face masks are useful The Centers for Disease Control and Prevention (CDC) has explained that wearing a cloth mask can help protect those around you, especially essential workers or other people with risk factors. The CDC explains that while homemade masks are not a substitute for social distancing, they are an important tool for protecting ourselves and others. Everyone should wear a cloth face covering when they need to go in public, for example to the grocery store or pick up other necessities. CDC.gov Making and wearing fabric face masks is important because it helps to reserve medical face masks intended for healthcare workers. I'm strongly warned before you spend time sewing these masks: Follow the CDC guidelines as the situation develops. Contact your local hospital and clinic to make sure they accept masks, and that all masks you make will meet their individual guidelines. The best fabric to use to a face mask researchers from the University of Cambridge tested the effectiveness of a wide range of household materials for use in homemade masks. They measured how well the household materials could capture and filter small particles. Test data shows that the best choices for DIY fabric masks are cotton t-shirts, pillowcases, or other cotton materials. Using a double layer of material for your DIY mask adds a small increase in the effectiveness of to do so. Other research has found that most effective masks were built from two layers of heavyweight cotton quilting with a wire count of at least 180, and had a thicker and tighter fabric. This face mask pattern has 2 layers of fabric, and an internal bag in which you can add extra layers of disposable filtration material if desired. Best Fitting Face Mask We all know that face masks should fit and be fit to make them the most effective. I have written a guide with many ideas on how to adjust mask patterns and fix premade masks for the best fitting mask. An important distinction Homemade face masks are not as effective as the N95 filtration mask recommended by the CDC, and are not a substitute for a good PPE. Rather, they are intended: To respond to the requests of the hospitals for emergency backup masks. To help community members slow the spread in public environments where other social distancing measures are difficult to enforce. Sources for further reading: Cambridge Study, Nature, Occ. Env Med, Annals Occ Hygiene) Some hospitals ask for homemade surgical masks Some hospitals and clinics accept donations of homemade face masks. Organizations like Masks for Heroes have a searchable database of facilities that are currently looking for donations. If you are wondering where to donate masks, they can help you find a hospital or clinic that needs them. Before you spend time sewing a large batch of masks to donate, call first to ask if they accept them. You should ask if this face mask pattern (2 layers of fabric with a bag for extra disposable inserts) will meet their requirements. You should also ask questions about

drop-off/pick-up procedures. DIY Face Mask Pattern The finished adult mask will be 7.75 wide and 3.75 high. Watch the full video tutorial on Youtube! Materials 100% cotton fabric (with a tight fabric)1/8 flat elastic for ear loops, or 4 fabric binders (you use the same cotton fabric to make strips, use pre-made bias binding, or strips of cotton sweater) fabric scissors or clipsewing machine and wire Cut List For an adult sized mask: Cut 1 fabric rectangle 16 long and 8.5 wide (40.5 cm by 21.5 cm)Cut 2 pieces elastic, each 7 long (or up to 8 for larger size adult) (18 cm – 20 cm) For a small children's mask: Cut 1 dust rectangle 14 long and 6.5 inches wide (35.5 by 16.5 cm)Cut 2 pieces of elastic, each 6 long (15 cm) For a large children's mask: Cut 1 dust rectangle 15 long and 7.5 inches wide (38 cm by 19 cm)Cut 19 cm cut 2 pieces e elastic , each 16.5 cm long (6.5 cm) For fabric bands, if you do not use elastic: Cut 4 rectangles 18 long by 1.75 inches wide (46 cm by 4.5 cm). Fold the long sides to meet in the middle, then fold in half again to wrap the rough edges. Insert the length of the rectangles along the edge to create the tires.18 may be too long for some people, especially children. Feel free to cut this off. Step 1: Sew at the top, with bag Fold the dust rectangle in half, with the right sides facing each other. Sew along the top 8.5 width edge, using a large 5/8 seam fee. Leave a 3 - 4 opening in the middle of this seam to opening to create the filter bag, and to make the mask be rotated right side after sewing. In the picture above, I have highlighted this opening with pins. Update: Some people may find it easier to insert/remove additional filter material if they a larger opening. Instead of leaving a 3 opening, you could have a 4 inch opening. Don't you want a filter bag? If you don't want or need a bag, that's fine. You still need to leave an opening so you can turn off the mask on the right. After you have attached the elastic or the straps (in the next step) and turned the mask to the right, sew the opening closed. Then you continue with the rest of the directions. Then turn the fabric so that the seam with the pocket opening is centered in the middle of one side. Using an iron, press open the seam. Fold the excess seam fee underneath, encapsulating the rough edge of the fabric. Topstitch or zigzag stitch along each side of this seam to finish the edge. This will help prevent the dust from fraying when you insert and remove any filters. See the following photo or video for clarification. Step 2: Pin Elastic or fabric bands using elastic: Pin a piece of elastic on each side of the mask, one end at the top corner and one end at the bottom corner of the fabric rectangle. This will create the ear loop as soon as the mask is turned off and ploated to the right. Place the ends of the elastic about 1/4 to 1/2 of the top and bottom of the fabric. The piece of elastic itself is sandwiched between the two layers of fabric. Once you turn the mask right out, the elastic will be on the outside. Repeat this process on each side to make two ear loops. Alternative - Use fabric bands: If you don't find elastic, or prefer to use fabric bands, you use 4 fabric bands, one in every corner. Each tie will be 18 long. Sew a tie in each corner, careful not to catch the tires in the seams. You also use twill tape, bias tape, or strips of cotton sweater (t-shirt fabric). The finished mask is then worn by tying the fabric strips behind the head. See notes at the bottom of the message. Step 3: Sew the sides, secure the straps with a 3/8 seam fee, sewing on each side of the face mask. Backstitch over the elastic or fabric bands to secure them. Trim the corners with scissors so it will be easier to turn the mask right. Be careful not to accidentally clip the stitches. Turn off the mask on the right and press with an iron. You use a pencil to push the corners out. Optional: Insert a flexible nose piece into Cut a 6-inch piece of pipe cleaner, flower wire or other flexible wire to create a nose piece. I folded the ends of wire back in to keep them from poking through the fabric. Place the wire through the pocket hole and slide it to the top of the mask. Stick around it on all 3 sides to hold it in place. Step 4: Make the folds Make the mask with three evenly distributed lines. To do this, measure and mark with a water-soluble fabric pen. Or, you what I did, and fold the mask in quarters - fold the sides to meet in the middle, and then fold back in half. Use an iron to make a crease. Use your markings to create three evenly spaced 1/2 folds. Create. The folds down, make sure that all folds are facing the same direction. Sew along the sides to secure the folds. I like to sew twice along the sides, just in case. When the mask is worn, the folds should open downwards to prevent particles from gathering in the folding bags. Fix problems with the pattern What if you do not find elastic? I've heard of a lot of people who are struggling to find elastic. If you don't find elastic to make the ear loops, you can make a mask with fabric bands instead. You use ready-made 1/4 twill tape, double-fold bias tape, or cut long strips of the same tightly woven cotton fabric that you use for the rest of the mask. To make bias binding fabric bands: Cut 18 long strips of fabric, 1.75 wide. Fold the long sides together (lengthwise or hot-dog style) so that they meet in the middle. Then fold the strips again (lengthways) to wrap the rough edges. Insert the strips along the edge to create the tires. If you wanted these straps to have a little stretch, you could also cut long strips of cotton sweater or knitted T-shirt material. The great thing about using jersey fabric is that it will form in a tube as you stretch it. And, it's comfortable to wear because it holds a little stretch. Whichever option you choose, you want to cut 4 pieces of about 18 long and attach a strip to each of the corners. The mask will attach by tying the straps behind the head. What about metal to help fit the mask better? To make the mask fit better around your nose, place a length of flexible metal at the top of the mask, by inserting the insert before forming the folds. Then you choke around the metal insert so that it stays in place. I've seen people use pipe cleaners, flower wire or twist binders. I have another article on how to add a nasal thread to masks patterns and premade masks. What do you use as a filter? It is so important that everyone understands that while wearing a cloth face mask can provide a certain level of protection, it cannot protect against viruses in the same way that an N95 mask can provide. Many different types of filters have been proposed, such as coffee filters, felt and vacuum filter bags. Not all of these filters are effective, and not all of them are safe. Without further research into the safety and efficacy of face mask filter materials, we will not know what the best filter is. Face mask filter materials: FRONT and CONS HEPA filters. In testing, a layer of HEPA vacuum cleaner bag seemed to perform best. However, it is difficult to breathe through. In addition, many people have expressed concerns about the safety of materials (such as fiber optics) that are used these filters. Right now I can't recommend them. Coffee filters. One of the mask designs published by the CDC contains a layer of a coffee filter. They are readily available and disposable. Blue store towels. Others have tested the efficacy of blue store towels, such as this one. They look but the data has not been publicly released or verified. Dryer sheet or baby wipes. Because these items are coated with odors and other chemicals, I do not recommend using them as a filter. Non-woven intervened. This has been suggested many times in the comments. I can't find any research that suggests it'll help. If you choose to use interfacing, avoid the fusible/iron-on types. Flannel or felt. These materials are not as tightly woven as the cotton fabric on the outside of the mask, so it is doubtful whether they would improve the effectiveness of filtration. In addition, they can catch moisture. Another layer of cotton fabric. The research we have suggests that the safest and easiest option for a filter is cotton t-shirt material or tightly woven cotton fabric. If you sew for hospitals, they may have their own medical grade filters. Always call before you sew to check their requirements. Disclaimer: This pattern has not been tested by the industry and is intended only for educational purposes. The decision to use this device is yours only. Where to donate masks? Not all hospitals ask for masks, but many do. Find your local hospital to see if they have solicited donations. Many groups, such as the Sewing & Craft Alliance, work to connect healthcare organizations with volunteer seamstresses. Check out their website, WeNeedMasks.org. Also, an organization called Masks for Heroes has a website with a searchable database of facilities that are currently looking for donations. If you are wondering where to donate masks, they can help you find a hospital or clinic that needs them. How do you wear a cloth mask? It is important to use the correct procedures when putting on and taking off your mask. Be careful not to touch your eyes, nose and mouth when removing the mask and wash your hands immediately afterwards. Here's a clear, step-by-step guide to the best way to wear a face mask properly. Important to note: Per the CDC, masks should not be placed on young children younger than 2 years, anyone who has difficulty breathing, or is unconscious, incapacitated or otherwise unable to remove coverage without assistance. What about earcups for face masks? Try one of these simple DIY Ear Savers patterns to make wearing your face masks much more comfortable! Click for a variety of free patterns. How do you clean and disinfect a cloth mask? Only wear dry masks. When masks get damp, even if it just comes out of your breath, they need to be cleaned. Wash masks regularly, with regular detergent and in a hot washing machine cycles. Dry completely. Free Face Mask Printable Pattern Click here to download a patterned PDF cotton fabric, tightly woven 1/8 elastic, or fabric tire sewing machine and wire scissors ruler sewing pins or clips Cut the fabric. For an adult-sized mask, cut 1 fabric rectangle 16 long and 8.5 wide. Cut 2 pieces of elastic, each 7 long. Or, cut 4 fabric tires 18 long. For an underlying-sized mask, cut 1 fabric rectangle 14 long and 6.5 wide. Dan Dan 2 pieces of elastic, each 6 long. Sew the top, with a pocket opening. Fold the fabric in half, with the right side. Sew along the edge of 8.5 inches wide, using a 5/8 seam fee. Allow a 3 opening in the middle of this seam to create an opening for the filter bag, and to allow the mask to be twisted right side after sewing. Open the seam. Topstitch/zig-zag stitch along both sides of the seam for a neater edge. Pin Elastic or fabric bands. Pin a piece of elastic on each side of the mask, one end at the top corner and one end at the bottom corner. When using fabric bands, pin a tie at each corner, with the rest of the tie sandwiched in the two layers of fabric. Sew the sides. Sew the sides of the face mask. Backstitch over the elastic or fabric bands to secure them. Cut the corners, turn the mask to the right and press with an iron. Sew the FoldsCreate three evenly distributed 1/2 folds. Pin the folds into place, making sure all folds are facing the same direction. Sew along each side to secure the folds. Note: When wearing the mask, the folds should open downwards to prevent particles from gathering in the folding bags. Some hospitals are asking for a larger pocket opening for faster filter changes - try 4. For a smaller child size, start with a square that is 6.5 by 14. For a larger child size, start with a square that is 7.5 by 15 Leave a comment on the blog or share a photo on Instagram Remember, before you start sewing a huge batch of masks, call the hospital or clinic and make sure they both want and can accept homemade masks. Masks.
